

VOLT®

Supply Chain Excellence

Volt Pharma Associates

August 2017

The Challenges

The pharmaceutical industry faces unprecedented pressure from, amongst others; increased market specific requirements, increasing regulatory hurdles and change timelines, serialisation and competition (including Generics). These pressures impact costs and drive increased supply chain complexity.

To survive and thrive in such a demanding environment, companies need to build truly integrated, patient-centric supply chains, that are appropriate to the product life cycle, assure product quality; are resilient yet adaptable, delivering continued value to the business.

- Do any of these challenges resonate with you?
- Are you feeling the pressure and are struggling to address these challenges and the resultant demands on you and your company?

Why Volt Pharma Associates?

- Are your supply chains designed to meet the needs of today's AND tomorrow's portfolio?
- Are your supply chains designed to meet the needs of the current position in the product life cycle?
- Have you developed and executed both tactical & strategic plans for your products, including consideration for: supply chain evolution, regulatory changes, risk, continuous improvement, total cost of ownership, future demands and life cycle management?
- Do you have a robust Business Continuity Plan?
- Have you built in resilience to your supply chain to avoid outages in any particular node?
- Can you assure supply continuity in the event of a supply chain incident?

VPA have assembled a team of highly experienced supply chain leaders from across the industry with successful track records of addressing these issues. They can help you deliver business value through:

- Reductions in inventory holding.
- Decreases in supply outages through Business Interruption management.
- More resilience and adaptability, reducing lead times and improving responsiveness.
- Delivering Improved customer service and strengthened relationships across the supply chain resulting in increased On-Time In-Full (OTIF).
- Reduced costs.
- Increased transparency and greater business contribution.

Our collaborative, hands on approach, will help transfer experience and capability to your teams and young talent, accelerating the development, improvement and sustainability of your supply chain capability.

Once the options have been agreed we can provide expertise to support successful implementation and change management.
